On this 3rd of Kislim, 2011 (Nov 28 evening), I am happy to announce the computer programs ***Placidus 7*** (with Porphyrius Magus 2)&

Porphyrius Magus 2 (as a separate program) containing many modules for research in Ancient Mesopotamian Astrology as practiced from 5,500 BC to AD 75.

The Babylonian Zodiac, The Sphaera Hermetica, The Celestial Pentagram of Venus, The Circle of Petosiris, The Oktatopon, Heliacal Calendar, Paranatellonta, Parapegma, Heliacal phases of stars and planets, 2D images of the zodiac with the stars, The Hermetic Zodiac with all 3 kinds of projection of the stars (simple, paranatellonta and ortus).

Ancient Mesopotamian Astrology, according to the tradition, is coming directly from the illumination of the first Hermes, the prophet Enoch, Lord Enmeduranki from pre-diluvial Sippar in 5,500 BC.

Being behind the mist of 7,500 years, we can see but only the outlines of that Original Astral Revelation. However, drawing from Akkadian texts, we can completely recreate the last reconstruction made by the third Hermes in around 770 BC.

Download description of the computer program Placidus 7 (with Porphyrius Magus 2)

Both programs are running on all windows.

Customers may request my assistance in the installation process in real time through skype or telephone.
